	INFORMATIC	TY THEOTHATION GENCE AGENCY  N REPORT	CD NO.
COUNTRY	Germany (Russian Zone)		DATE DISTR. 6 December 1951
SUBJECT	Sachsenwerk, Radeberg; TB Kabe Niedersedlitz; BEM Berlin -	el,	NO. OF PAGES 2
PLACE ACQUIRED			NO. OF ENCLS. LISTED BELOW? 50X1-HUI
DATE OF		CIRCULAT	E SUPPLEMENT TO REPORT

THIS DOCUBERT CONTAINS INFONMATION AFFECTING THE NATIONAL DEPENDING OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT 50 N. S. C., BI, AND 32, AS ASSENDED. HIS TRANSMISSION OR THE REVIGATION OF THE CONTAINS IN ARY MANURE TO AN UNAUTHORIZED VEISON IN PRO-HIBITED STATES. REPRODUCTION OF THIS FORE IS PROBIBITED.

50X1-HUM

### Sachsenwerk Radeberg:

### 1. <u>Television Receivers</u>:

Production was running at the rate of about 8 sets per diem in mid-June 1951. Some condensers had been received from the USSR for installation in the receivers. By mid-July production had increased to about 20-30 sets per diem.

### 2. <u>Decimeter apparatus</u>:

The RVG 903 (Stuttgart) decimeter set is being developed for the purpose of making it suitable for the transmission of television programs. It has been decided to construct it so that HF impulses are passed direct from receiver to transmitter at the intermediate stations without any IF stage, because of the increase in distortion (Klirrfaktor) when transformed from HF to TF and back again. The new type is much larger than the old, the complete apparatus standing over two meters high.

- 3. Pecimeter sets are normally tested between Radeberg and the Valtenberg (where the restaurant was burnt down in May), and between Radeborg and the Scheibeberg (16 kms away). The new set was also being tested in July between the Brocken and the Fichtelberg (260 kms away). Collm (near Oschatz) has been used also.
- 4. Of 90 Studebaker 3-axle lend-lease trucks which had been fitted with RVG 902 decimeter equipment, 30 had been returned to the factory for modification by mid-June 1951.
- 5. It was intended in June to set up a decimeter link consisting of permanent stations between Berlin and Koenigswusterhausen. Two systems were to be installed in parallel, to insure that the link remained in action.

6. Decimeter equipment known as 911/912 and 920 is also under development. The latter is a waterproof set.

### 7. Other products:

The factory is also manufacturing a superheterodyne receiver incorporating band-spread. Other products are 60-ampere switches, and crane motors of smaller sizes (the larger sizes are being made in the Sachsenwerk, Niedersedlitz).

50X1-HUM

Technisches			

Tikhanov (fnu), Russian head of TB in the USSR from about 1 May to 13	Mabel, July.	Was absent on leave with his wife A Russian named Shkodnikov (fmu)
deputized for him in his absence.		

9,0	Magretz (fmu), German head of the TB Kab April. He was succeeded by Josef Watzul late 1950. Dipl. Ing. Josef Watzula was	a, who returned from the USSR in
	work at the Sachsenwerk Niedersedlitz.	

- 10. In July the office was engaged mainly in the design of electric motors 50X1-HUM conveying steel billets in rolling mills (Rollgangsmotoren). They must be capable of operating at 120 °C, and must not be damaged if stopped for two minutes with the current on. They must also be reversible. They are to be of 0.6 and 2 kw at 1500 RPM. The BEM Berlin is designing the larger sizes. The Russians want 200 of the smaller sizes manufactured.
- 11. Other projects being worked on are:
  - (a) The design of "Drehregler". Drawings of the motor, and the tools necessary for its mass production are being made.
  - (b) The design of a submersible motor for use at the bottom of deep wells.

    Must be small in cross-section, and completely waterproof. Drawings only are required of the motor.
  - (c) The modification of drawings previously made by the office of small and medium motors into drawings of fully enclosed motors.
  - (d) Drawings of couplings, clutches etc.

#### Buro Elektrischer Maschinen (BEM), Berlin:

- 12. The present Russian head is Panchukov (fmu). Mrs. Shutakova (fmu) is still employed in the office.
- 13. Batyrev (fmu) is now working in the Urals. B.I. Kusnetsov is now a Ministry employee in Moscow, and edits a technical periodical. He and Miller (fmu) (formerly in Dresden) have been awarded Stalin Prizes. Britsin (fmu) is now working in the design office of a factory in Leningrad which makes hydroelectric generating equipment.
